

Retail Industry User Story for Requirement Gap & Ambiguity Detection Agent

User Story ID: US-RET-101

Title: Online Product Returns

Description

As a customer, I want to return products purchased from the online store so that I can receive a refund or replacement when needed. Customers should be able to return products through the retailer website or mobile application. The return process should be simple, fast, and convenient. Customers should receive timely updates about their return status.

Certain products may be eligible for return while others may not. Some returns might require approval before processing. Refunds should be issued as quickly as possible once the return is accepted.

Business Requirements

1. Customers should be able to initiate a return for eligible products.
2. Returns should be processed within an acceptable timeframe.
3. High-value returns may require additional approval.
4. Customers should receive notifications during the return lifecycle.
5. Refunds should be provided after successful return validation.
6. The system should prevent fraudulent returns.
7. Product return policies should be enforced.
8. The solution should integrate with logistics partners.
9. Customer and payment information should be protected.
10. The return process should comply with company and regulatory policies.

Acceptance Criteria

1. Customer can submit a return request.
2. Return request is validated successfully.
3. Approved returns are processed.
4. Customer receives refund or replacement.
5. Customer is notified of return status updates.

Additional Notes

Premium customers may receive special return benefits. Certain products may not be eligible for returns. Expedited refunds may be available in some situations. Approval may be required for specific return requests.
